**In the Claims:**

Claims 1-36 (cancelled)

37. (original) A method for making a coaxial cable jumper assembly comprising:

forming a tin layer on an aluminum outer conductor of a jumper coaxial cable, the jumper coaxial cable further comprising an inner conductor and a dielectric layer between the inner and outer conductors; and

soldering at least one connector to the tin layer adjacent at least one respective end of the jumper coaxial cable.

38. (original) A method according to Claim 37 wherein forming the tin layer comprises forming a tin alloy layer.

39. (original) A method according to Claim 38 wherein forming the tin alloy layer comprises forming a tin/lead alloy layer.

40. (original) A method according to Claim 37 wherein the outer conductor has a continuous, non-braided, tubular shape.

41. (original) A method according to Claim 37 wherein forming the tin layer comprises plating the tin layer.

42. (original) A method according to Claim 41 wherein plating the tin layer comprises plating the tin layer

to extend continuously along an entire length of the outer conductor.

43. (original) A method according to Claim 41 wherein plating is performed in a plating bath.

44. (original) A method according to Claim 41 wherein plating the tin layer comprises plating the tin layer on a radially-outer surface of the aluminum layer.

45. (original) A method according to Claim 37 further comprising cutting the jumper coaxial cable to a desired length before soldering.

46. (original) A method according to Claim 37 further comprising forming a jacket surrounding the outer conductor and stripping back a portion thereof prior to soldering.

47. (original) A method according to Claim 37 wherein soldering comprises positioning a body of solder between the at least one connector and the outer conductor, and thereafter heating the body of solder to flow and join the at least one connector and outer conductor together.

48. (original) A method according to Claim 47 wherein the heating is performed by induction heating.

49. (original) A method according to Claim 37 wherein soldering comprises injecting melted solder between the at least one connector and the outer conductor to join the

---

at least one connector and outer conductor together.

50. (original) A method according to Claim 37 wherein soldering at least one connector comprises soldering first and second connectors on respective first and second ends of the jumper coaxial cable.

Please add the following new Claims 51-59.

51. (new) A method for making a coaxial cable jumper assembly comprising:

plating a tin layer to extend continuously along an entire length of an aluminum outer conductor of a jumper coaxial cable, the outer conductor having a continuous, non-braided, tubular shape, and the jumper coaxial cable further comprising an inner conductor and a dielectric layer between the inner and outer conductors; and

soldering at least one connector to the tin layer adjacent at least one respective end of the jumper coaxial cable.

52. (new) A method according to Claim 51 wherein plating the tin layer comprises plating a tin alloy layer.

53. (new) A method according to Claim 51 wherein plating the tin alloy layer comprises plating a tin/lead alloy layer.

54. (new ) A method according to Claim 51 wherein plating is performed in a plating bath.

---

55. (new) A method according to Claim 51 further comprising cutting the jumper coaxial cable to a desired length before soldering.

56. (new) A method according to Claim 51 further comprising forming a jacket surrounding the outer conductor and stripping back a portion thereof prior to soldering.

57. (new) A method according to Claim 51 wherein soldering comprises positioning a body of solder between the at least one connector and the outer conductor, and thereafter heating the body of solder to flow and join the at least one connector and outer conductor together.

58. (new) A method according to Claim 51 wherein soldering comprises injecting melted solder between the at least one connector and the outer conductor to join the at least one connector and outer conductor together.

59. (new) A method according to Claim 51 wherein soldering at least one connector comprises soldering first and second connectors on respective first and second ends of the jumper coaxial cable.
